(57) Abstract :  
 The present invention relates to a specialized pan designed for preparing sunny-side-up eggs with precision and ease. The pan features a shallow depth to control egg whites' spread, a non-stick surface for effortless cooking, and temperature control mechanisms to prevent browning while maintaining a runny yolk. Optional egg rings or molds ensure uniform shapes, enhancing the aesthetic and functional appeal for sandwiches and other dishes. A transparent lid, where included, allows steam circulation for setting whites without flipping. Compact in size and focused on even heat distribution, the pan is a perfect sunny-side-up eggs every time.
