

Program Outcomes (POs)

B.Sc. Information Technology

PO 1: IT Knowledge

Understand core IT concepts including programming, networking, system software, databases, web development, and information security.

PO 2: Problem Analysis

Analyze IT-related problems using logical reasoning, data interpretation, and structured methodologies to identify effective solutions.

PO 3: Design & Development of IT Solutions

Design, implement, and evaluate IT solutions such as websites, applications, networks, and database systems to meet user requirements.

PO 4: Digital & Cyber Awareness

Demonstrate understanding of cybersecurity principles, safe digital practices, data privacy, and compliance with IT laws and ethics.

PO 5: Project Management, Entrepreneurship & Innovation Skills

Apply project management principles, planning, scheduling, and resource management skills in IT projects and system deployments. Use IT skills to develop innovative solutions, startups, freelancing opportunities, and technology-driven businesses
